Washing Machine
User’s Manual
Please read this user manual first!
Dear Customer,
We hope that you get the best results from the product which has been manufactured in state-of-the-art plants and passed through a strict quality control procedure. Therefore, please read the entire user manual carefully before using the product and keep it as a reference for future use. In case of transferring the product to someone else, give the manual as well.

The user manual will help you use your machine in a fast and safe way.
• Read the user manual before installing and starting your product.
• Always follow the safety instructions.
• Keep this user manual within easy reach for future reference.
• Read also the other documents supplied with the product.
Remember that this user manual is also applicable for several other models. Differences between models will be identified in the manual.

Explanation of symbols
Throughout this user manual the following symbols are used:

⚠️ Important information or useful hints about usage.
⚠️ Warning for hazardous situations with regard to life and property.
⚠️ Warning for electric shock.

This appliance’s packaging material is recyclable. Help recycle it and protect the environment by dropping it off in the municipal receptacles provided for this purpose. Your appliance also contains a great amount of recyclable material. It is marked with this label to indicate the used appliances that should not be mixed with other waste. This way, the appliance recycling organised by your manufacturer will be done under the best possible conditions, in compliance with European Directive 2002/96/EC on Waste Electrical and Electronic Equipment. Contact your town hall or your retailer for the used appliance collection points closest to your home. We thank you doing your part to protect the environment.

- Technical specifications may be changed without prior notice to improve the quality of the product.
- Figures in this manual are schematic and may not match the product exactly.
- Values stated on the product labels or in the documentation accompanying it are obtained in laboratory conditions in accordance with the relevant standards. Depending on operational and environmental conditions of the product, these values may vary.
Warnings

Please read the following information. Otherwise, there may be the risk of personal injury or material damage. Moreover, any warranty and reliability commitment will become void.

General Safety
- Never place your machine on a carpet covered floor. Otherwise, lack of airflow from below of your machine may cause electrical parts to overheat. This may cause problems with your washing machine.
- If the power cable or mains plug is damaged you must call Authorized Service for repair.
- Check water hoses for wear. Do not use old/used water inlet hoses. These may cause stains on your laundry.
- Fit the drain hose into the discharge housing securely to prevent any water leakage and to allow machine to take in and discharge water as required. It is very important that the water intake and drain hoses are not folded, squeezed, or broken when the appliance is pushed into place after it is installed or cleaned.
- Your washing machine is designed to continue operating in the event of a power interruption. You cannot cancel any program by pressing the “On/Off button.” Your machine will not resume its program when the power restores. Press the “Start/Pause/Cancel” button for 3 seconds to cancel the program (See, Cancelling a Program).
- There may be some water in your machine when you receive it. This is from the quality control process and is normal. It is not harmful to your machine.
- Some problems you may encounter may be caused by the software. Press “Start/Pause/Cancel” button for 3 seconds to cancel the program set in your machine before calling the authorized service.

First Use
- To prepare your machine for washing, carry out your first washing process without loading your machine and with detergent under “Cottons 90°C” program.
- Ensure that the cold and hot water connections has been made correctly when installing your machine. Otherwise, your laundry may come out hot at the end of the washing process and may wear out.
- If the current fuse or circuit breaker is less than 16 Amperes, please have a qualified electrician install a 16 Ampere fuse or circuit breaker.
- While using with or without a transformer, do not neglect to have the grounding installation laid by a qualified electrician. Our company shall not be liable for any damages that may arise when the machine is used on a line without grounding.
- To make your machine ready for use, please be sure that the tap water supply and water drainage systems are appropriate before calling the authorized service. If they are not, call a qualified plumber to have any necessary arrangements carried out.

Intended use
- This product has been designed for home use.
- The appliance may only be used for washing and rinsing of textiles that are marked accordingly.
- Only detergents, softeners and supplements suitable for washing machines may be used.
- Observe the care instructions labelled on textile products and any other instructions given by companies that produce detergents for your machine.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction.
concerning use of the appliance by a person responsible for their safety.

**Safety instructions**

- This appliance must be connected to an earthed outlet protected by a fuse of suitable capacity.
- The supply and draining hoses must always be securely fastened and remain in an undamaged state.
- Fit the draining hose to a washbasin or bathtub securely before starting up your machine. There may be a risk of being scalded due to high washing temperatures!
- Never open the door or remove the filter while there is still water in the drum. Otherwise, there may be the risk of flooding and possible injury due to the hot water.
- Never force open the locked door! The door will be ready to open just a few minutes after the washing cycle comes to an end.
- Unplug the machine when it is not in use.
- Never wash down the appliance with a water hose! There is the risk of electric shock! Always disconnect from the mains by unplugging before cleaning.
- Never touch the plug with wet hands. Never unplug by pulling on the cable, always pull out from the plug only. Do not operate the machine if the power cord or plug is damaged.
- Never attempt to repair the machine yourself. Otherwise, you may be putting yours and other’s lives in danger.
- For malfunctions that cannot be solved by information in the operating manual: Turn off the machine, unplug it, turn off the water tap and contact an authorized service agent.

**If there are children in your house...**

- Electrical appliances may be dangerous for the children. Keep children away from the machine when it is operating. Do not let them tamper with the machine.
- Close the door when you leave the area where the machine is located.
- Store all detergents in a safe place out of reach of the children.
Installation

Refer to the nearest Authorised Service Agent for installation of the product. To make the product ready for use, review the information in the user manual and make sure that the electricity, tap water supply and water drainage systems are appropriate before calling the Authorized Service Agent. If they are not, call a qualified technician and plumber to have any necessary arrangements carried out.

Preparation of the location and electrical, tap water and waste water installations at the place of installation is under customer’s responsibility.

Installation and electrical connections of the product must be carried out by the Authorized Service Agent. Manufacturer shall not be held liable for damages that may arise from procedures carried out by unauthorized persons.

Prior to installation, visually check if the product has any defects on it. If so, do not have it installed. Damaged products cause risks for your safety.

Make sure that the water inlet and discharge hoses as well as the power cable are not folded, pinched or crushed while pushing the product into its place after installation or cleaning procedures.

Appropriate installation location

- Place the machine on a rigid floor. Do not place it on a long pile rug or similar surfaces.
- Total weight of the washing machine and the dryer -with full load- when they are placed on top of each other reaches to approx. 180 kilograms. Place the product on a solid and flat floor that has sufficient load carrying capacity!
- Do not place the product on the power cable.
- Do not install the product at places where temperature may fall below 0ºC.
- Place the product at least 1 cm away from the edges of other furniture.

Removing packaging reinforcement

Tilt the machine backwards to remove the packaging reinforcement. Remove the packaging reinforcement by pulling the ribbon.

Removing the transportation locks

Do not remove the transportation locks before taking out the packaging reinforcement.

Remove the transportation safety bolts before operating the washing machine, otherwise, the product will be damaged.

1. Loosen all the bolts with a spanner until they rotate freely (C).

2. Remove transportation safety bolts by turning them gently.
3. Attach the plastic covers supplied in the User Manual bag into the holes on the rear panel. (P)

![Image of plastic covers being attached]

- Keep the transportation safety bolts in a safe place to reuse when the washing machine needs to be moved again in the future.
- Never move the product without the transportation safety bolts properly fixed in place!

**Connecting water supply**
- The water supply pressure required to run the product is between 1 to 10 bars (0.1 – 10 MPa). It is necessary to have 10 – 80 liters of water flowing from the fully open tap in one minute to have your machine run smoothly. Attach a pressure reducing valve if water pressure is higher.
- If you are going to use the double water-inlet product as a single (cold) water-inlet unit, you must install the supplied stopper to the hot water valve before operating the product. (Applies for the products supplied with a blind stopper group.)
- If you want to use both water inlets of the product, connect the hot water hose after removing the stopper and gasket group from the hot water valve. (Applies for the products supplied with a blind stopper group.)
- Models with a single water inlet should not be connected to the hot water tap. In such a case the laundry will get damaged or the product will switch to protection mode and will not operate.
- Do not use old or used water inlet hoses on the new product. It may cause stains on your laundry.

1. Connect the special hoses supplied with the product to the water inlets on the product. Red hose (left) (max. 90 ºC) is for hot water inlet, blue hose (right) (max. 25 ºC) is for cold water inlet.

![Image of hoses being connected]

- Ensure that the cold and hot water connections are made correctly when installing the product. Otherwise, your laundry will come out hot at the end of the washing process and wear out.

2. Tighten all hose nuts by hand. Never use a wrench when tightening the nuts.

![Image of nuts being tightened]

3. Open the taps completely after making the hose connection to check for water leaks at the connection points. If any leaks occur, turn off the tap and remove the nut. Retighten the nut carefully after checking the seal. To prevent water leakages and damages caused by them, keep the taps closed when the machine is not in use.

**Connecting to the drain**
- The end of the drain hose must be directly connected to the wastewater drain or to the washbasin.
- Your house will be flooded if the hose comes out of its housing during water discharge. Moreover, there is risk of scalding due to high washing temperatures! To prevent such situations and to ensure smooth water intake and discharge of the machine, fix the end of the discharge hose tightly so that it cannot come out.
The hose should be attached to a height of at least 40 cm, and 100 cm at most.

In case the hose is elevated after laying it on the floor level or close to the ground (less than 40 cm above the ground), water discharge becomes more difficult and the laundry may come out excessively wet. Therefore, follow the heights described in the figure.

To prevent flowing of dirty water back into the machine and to allow for easy discharge, do not immerse the hose end into the dirty water or drive it in the drain more than 15 cm. If it is too long, cut it short.

The end of the hose should not be bent, it should not be stepped on and the hose must not be pinched between the drain and the machine.

If the length of the hose is too short, use it by adding an original extension hose. Length of the hose may not be longer than 3.2 m. To avoid water leak failures, the connection between the extension hose and the drain hose of the product must be fitted well with an appropriate clamp as not to come off and leak.

Adjusting the feet

In order to ensure that the product operates more silent and vibration-free, it must stand level and balanced on its feet. Balance the machine by adjusting the feet. Otherwise, the product may move from its place and cause crushing and vibration problems.

1. Loosen the lock nuts on the feet by hand.
2. Adjust the feet until the product stands level and balanced.
3. Tighten all lock nuts again by hand.

Do not use any tools to loosen the lock nuts. Otherwise, they will get damaged.

Raising the appliance

In order to raise the appliance to eliminate the gap below the worktop, you will need to order special optional kit.

Built-in installation section.
**Electrical connection**

Connect the product to a grounded outlet protected by a fuse complying with the values in the "Technical specifications" table. Our company shall not be liable for any damages that will arise when the product is used without grounding in accordance with the local regulations.

- Connection must comply with national regulations.
- Power cable plug must be within easy reach after installation.
- The voltage and allowed fuse or breaker protection are specified in the “Technical specifications” section. If the current value of the fuse or breaker in the house is less than 13 Amps, have a qualified electrician install a 13 Amp fuse.
- The specified voltage must be equal to your mains voltage.
- Do not make connections via extension cables or multi-plugs.

⚠ Damaged power cables must be replaced by the Authorized Service Agents.

**Electrical requirements**

Before you insert the plug into the wall socket make sure that the voltage and the frequency shown in the rating label corresponds to your electricity supply. We recommend that this appliance be connected to the mains supply via a suitable switched and fused socket in a readily accessible position.

Should the mains lead of the appliance become damaged or need replacing at any time, it must be replaced by a special purpose made mains lead which can only be obtained from a Authorised Service Agent.

⚠ This appliance must be earthed

If the fitted moulded plug is not suitable for your socket, then the plug should be cut off and an appropriate plug fitted.

Destroy the old plug, which is cut off as a plug with a bared cord could cause a shock hazard if inserted into a socket elsewhere in the house.

The moulded plug on this appliance incorporates a 13A fuse. Should the fuse need to be replaced an ASTA approved BS1362 fuse of the same rating must be used. Do not forget to refit the fuse cover. In the event of losing the fuse cover, the plug must not be used until a replacement fuse cover has been fitted. Colour of the replacement fuse cover must be the same colour as that visible on the pin face of the plug. Fuse covers are available from any good electrical store.

**Important**

**Fitting a different plug**

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals on your plug, proceed as follows:

1. Connect the green - yellow or green (earth) wire to the terminal in the plug marked ‘E’ or with the symbol f or coloured green and yellow or green.
2. Connect the blue (neutral) wire to the terminal in the plug marked ‘N’ or coloured black.
3. Connect the brown (live) wire to the terminal in the plug marked ‘L’ or coloured red.

With the alternative plugs a 13A fuse must be fitted either in the plug or adaptor or in the main fuse box. If in doubt contact a qualified electrician.
First use
Before starting to use the product, make sure that all preparations are made in accordance with the instructions in sections "Important safety instructions" and "Installation".
To prepare the product for washing laundry, perform first operation in Drum Cleaning programme. If your machine is not featured with Drum Cleaning programme, use Cottons-90 programme and select Additional Water or Extra Rinse auxiliary functions as well. Before starting the programme, put max. 100 g of powder anti-limescale into the main wash detergent compartment (compartment nr. II). If the anti-limescale is in tablet form, put only one tablet into compartment nr. II. Dry the inside of the bellow with a clean piece of cloth after the programme has come to an end.

Use an anti-limescale suitable for the washing machines.
Some water might have remained in the product due to the quality control processes in the production. It is not harmful for the product.

Disposing of packaging material
Packaging materials are dangerous to children. Keep packaging materials in a safe place away from reach of the children.
Packaging materials of the product are manufactured from recyclable materials. Dispose of them properly and sort in accordance with recycled waste instructions. Do not dispose of them with normal domestic waste.

Transportation of the product
1. Unplug the product before transporting it.
2. Remove water drain and water supply connections.
3. Drain the remaining water in the product completely; see, "Draining remaining water and cleaning the pump filter".
4. Install transportation safety bolts in the reverse order of removal procedure; see, "Removing the transportation locks".

Never move the product without the transportation safety bolts properly fixed in place!

Disposing of the old product
Dispose of the old product in an environmentally friendly manner. Refer to your local dealer or solid waste collection centre in your area to learn how to dispose of your product. For children's safety, cut the power cable and break the locking mechanism of the loading door so that it will be nonfunctional before disposing of the product.
Preparation

Things to be done for energy saving

Following information will help you use the product in an ecological and energy-efficient manner.

- Operate the product in the highest capacity allowed by the programme you have selected, but do not overload; see, “Programme and consumption table”.
- Always follow the instructions on the detergent packaging.
- Wash slightly soiled laundry at low temperatures.
- Use faster programmes for small quantities of lightly soiled laundry.
- Do not use prewash and high temperatures for laundry that is not heavily soiled or stained.
- If you plan to dry your laundry in a dryer, select the highest spin speed recommended during washing process.
- Do not use detergent in excess of the amount recommended on the detergent package.

Sorting the laundry

- Sort laundry according to type of fabric, colour, and degree of soiling and allowable water temperature.
- Always obey the instructions given on the garment tags.

Preparing laundry for washing

- Laundry items with metal attachments such as, underwired bras, belt buckles or metal buttons will damage the machine. Remove the metal pieces or wash the clothes by putting them in a laundry bag or pillow case.
• Take out all substances in the pockets such as coins, pens and paper clips, and turn pockets inside out and brush. Such objects may damage the product or cause noise problem.
• Put small size clothes such as infant’s socks and nylon stockings in a laundry bag or pillow case.
• Place curtains in without compressing them. Remove curtain attachment items.
• Fasten zippers, sew loose buttons and mend rips and tears.
• Wash “machine washable” or “hand washable” labeled products only with an appropriate programme.
• Do not wash colours and whites together. New, dark coloured cottons release a lot of dye. Wash them separately.
• Tough stains must be treated properly before washing. If unsure, check with a dry cleaner.
• Use only dyes/colour changers and limescale removers suitable for machine wash. Always follow the instructions on the package.
• Wash trousers and delicate laundry turned inside out.
• Keep laundry items made of Angora wool in the freezer for a few hours before washing. This will reduce pilling.
• Laundry that are subjected to materials such as flour, lime dust, milk powder, etc. intensely must be shaken off before placing into the machine. Such dusts and powders on the laundry may build up on the inner parts of the machine in time and can cause damage.

Correct load capacity
The maximum load capacity depends on the type of laundry, the degree of soiling and the washing programme desired. The machine automatically adjusts the amount of water according to the weight of the loaded laundry.

⚠️ Follow the information in the “Programme and consumption table”. When overloaded, machine’s washing performance will drop. Moreover, noise and vibration problems may occur.

Laundry types and their average weights in the following table are given as examples.

<table>

</tr>
</tbody>
</table>

Loading the laundry
• Open the loading door.
• Place laundry items loosely into the machine.
• Push the loading door to close until you hear a locking sound. Ensure that no items are caught in the door.

⚠️ The loading door is locked while a programme is running. The door can only be opened a while after the programme comes to an end.

⚠️ In case of misplacing the laundry, noise and vibration problems may occur in the machine.
**Detergents and softeners**

**Detergent Drawer**

Detergent drawer of your washing machine consists of four different compartments for powder main wash detergent, liquid main wash detergent, liquid softener and powder pre-wash detergent. Each of these laundry additives are dispensed automatically in the relevant time during the washing Programme.

Do not place the laundry additives directly into the drum. Always use the detergent drawer.

Do not close the drawer too fast after putting the laundry additives. This may cause the additives be dispensed early, creating unsatisfactory washing results and fabric damage.

Do not open the drawer during washing Programme.

**The detergent drawer compartments are indicated below:**

1) Left compartment with number “II” (Main wash compartment for powder detergent or powder bleach/stain remover)
2) Left compartment with number “II 🔗” (Main wash compartment for liquid detergent or liquid stain remover)
3) Middle compartment with number “I” (pre-wash compartment for powder detergent, powder stain remover or liquid bleach - liquid bleach must be added either during the pre-wash or during the first rinsing step of the washing Programme). Liquid bleach must be added manually while the machine takes in water.
4) Right compartment with “✨” symbol (liquid softener compartment)

**(II) Main Wash Compartment**

Before starting the washing Programme, put powder detergent into the left compartment with number “II”. Use the detergent manufacturer’s measuring cup and follow the instructions on the package. Powder bleach/stain remover must also be put into this compartment.

Put the liquid detergent into the main wash compartment with number “II 🔗” before starting the washing Programme. Liquid stain remover must be put into this compartment.

Put the suggested amount of liquid detergent into the left compartment with “II 🔗” symbol and dilute it to the maximum filling level line (max. II 🔗) with warm water.

Particularly the concentrated detergents must be diluted with warm water; otherwise, the siphon may get clogged in time.

Do not fill the detergent above the maximum filling level line; otherwise the excess amount of detergent will reach the laundry without water and may cause stains on the garments. In this case you will need to refill the compartment. Do not pour the detergent onto the laundry directly since this may cause stains on the garments.

**Liquid Softener Compartment**

Put the suggested amount of liquid softener into the right compartment with “✨” symbol and dilute it to the maximum filling level line (max. ✨) with warm water.
Particularly the concentrated softeners must be diluted with warm water; otherwise, the siphon may get clogged in time.
Do not fill the softener above the maximum filling level line; otherwise the excess amount of softener will get mixed with the washing water and you will need to refill the compartment. Do not pour the softener onto the laundry directly since this may cause stains on the garments.
Liquid softener will be dispensed automatically at the final rinsing step of the washing Programme.

(I) Pre-Wash Compartment
Put the powder pre-wash detergent or powder stain remover into the middle compartment with number “I”.
You can also put liquid bleach into this compartment while the machine takes in water during pre-wash or first rinsing step. Adding the liquid bleach while the machine takes in water allows it to be diluted before it is poured onto the laundry.
You must select extra rinsing option if you use liquid bleach in a washing Programme. Bleach must be removed from the laundry with rinsing; otherwise it may cause itching on the skin.

Read the dosage instructions and label of your garments carefully before using the liquid bleach.

Starch
- Add liquid starch, powder starch or the dyestuff into the softener compartment as instructed on the package.
- Never use fabric softener and starch together in the same washing cycle.
- Wipe the inside of the drum after using starch.

Bleaches
If you are going to use regular bleach in your machine, it is suggested to select a Programme with pre-wash step and add the bleach at the beginning of the pre-wash without putting detergent into the pre-wash compartment. Alternatively, it is suggested to select a Programme with extra rinsing and add the bleach while the machine takes in water from the detergent drawer in the first rinsing step. Bleach should not be mixed with detergent. Since the bleach may cause irritation on skin, little amounts must be used and rinsed thoroughly. Do not pour bleach directly onto the laundry and do not use it with colour laundry.
When using oxygen based bleach, follow the instructions on the package and select a Programme at low temperature. Oxygen based bleach can be used together with the detergent. However, if it is not at the same thickness with the detergent, then it must be added from the compartment number “II” right after the detergent foams with water.

Eliminating lime formation
- When required, use only appropriate lime removers developed specifically for washing machines and always follow the instructions on the package.
## Tips for efficient washing

- Start symbol
- Pause symbol
- Auxiliary Function symbols
- No Water symbol
Preparing the machine
1. Make sure that the hoses are connected tightly.
2. Plug in your machine.
3. Turn the tap on completely.
4. Place the laundry in the machine.
5. Add detergent and fabric softener.

Programme selection
1. Select the programme suitable for the type, quantity and soiling degree of the laundry in accordance with the "Programme and consumption table" and the temperature table below.

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>90°C</td>
<td>Heavily soiled white cottons and linens. (coffee table covers, tableclothes, towels, bed sheets, etc.)</td>
</tr>
<tr>
<td>60°C</td>
<td>Normally soiled, coloured, fade proof cottons or synthetic clothes (shirt, nightgown, pajamas, etc.) and lightly soiled white linens (underwear, etc.)</td>
</tr>
<tr>
<td>40°C-30°C-Cold</td>
<td>Blended laundry including delicate textile (veil curtains, etc.), synthetics and woolens.</td>
</tr>
</tbody>
</table>

2. Select the desired programme with the Programme Selection button.

Additional programmes
For special cases, additional programmes are available in the machine.

- **Cotton Eco**
  You may wash your normally soiled durable cotton and linen laundry in this programme with the highest energy and water saving compared to all other wash programmes suitable for cottons. Actual water temperature may differ from the declared cycle temperature. Programme duration may automatically be shortened during later stages of the programme if you wash less amount (e.g. ½ capacity or less) of laundry. In this case energy and water consumption will be further decreased giving you the opportunity for a more economical wash. This feature is available for certain models having remaining time display.

- **Intensive +**
  Use this programme to wash baby laundry, and the laundry that belongs to allergic persons. Longer heating time and an additional rinsing step provide a higher level of hygiene.

- **Delicate**
  Use this programme to wash your delicate clothes. It washes with a gentle

- **Synthetics**
  Use this programme to wash your synthetic clothes (shirts, blouses, synthetic/cotton blends, etc.). It washes with a gentle action and has a shorter washing cycle compared to the Cottons programme.

For curtains and tulle, use the Synthetic 40°C programme with prewash and anti-creasing functions selected. As their meshed texture causes excessive foaming, wash the veils/tulle by putting little amount of detergent into the main wash compartment. Do not put detergent in the prewash compartment.

- **Woolen**
  Use this programme to wash your woolen clothes. Select the appropriate temperature complying with the tags of your clothes. Use appropriate detergents for woolens.
action without any interim spin compared to the Synthetics programme.

- **Hand Wash**
  Use this programme to wash your woolen/delicate clothes that bear “not machine- washable” tags and for which hand wash is recommended. It washes laundry with a very gentle washing action to not to damage clothes.

- **Quick**
  Use this programme to wash your lightly soiled cotton clothes in a short time.

- **Eco 40**
  Use this programme to wash your laundry for which you cannot use Cottons 60 °C programme. It gives the same result with the Cottons 60 °C programme by washing for a longer time at 40 °C, thus enabling energy saving.

- **Mix 40**
  Use this programme to wash your cotton and synthetic clothes together without sorting them.

- **Intensive**
  You can wash your durable and heavily soiled clothes on this program. This program washes for a longer time and an extra rinse cycle will be made compared to the “Cottons” program. You can use it for your heavily soiled clothes that you wish to be rinsed gently.

- **Curtain**
  Use this programme to wash your tulles and curtains. Thanks to the special spin profile of the programme, tulles and curtains crease lesser. As their meshed texture causes excessive foaming, wash the veils/tulle by putting little amount of detergent into the main wash compartment. Do not put detergent in the prewash compartment. Prewash is used to clean the dirt (dust, sooth, etc.) on the tulles / curtains that can be removed easily.

  It is suggested to use recommended detergents for curtains in this programme.

- **Quick+Daily**
  This program is used to quickly wash a small number of lightly soiled cotton garments.

- **Cotton 20**
  Use this programme, which is much more sensitive to environment and natural resources, to wash your lightly soiled and unstained cotton laundry (max. 3.5 kg) in a short time and economically.

  It is recommended to use liquid detergent or gel washing detergent.

**Special programmes**

For specific applications, select any of the following programmes.

- **Rinse**
  Use this programme when you want to rinse or starch separately.

- **Spin+Drain**
  Use this programme to apply an additional spin cycle for your laundry or to drain the water in the machine. Before selecting this programme, select the desired spin speed and press Start / Pause / Cancel button. The machine will spin the laundry with the set spin speed and drain the water coming out of them. If you wish to drain only the water without spinning your laundry, select the Pump+Spin programme and then select the No Spin function with the help of Spin Speed Adjustment button. Press Start / Pause / Cancel button.

  Use a lower spin speed for delicate laundries.

**Temperature selection**

Whenever a new programme is selected, the maximum temperature for the selected programme appears on the temperature indicator. To decrease the temperature, press the Temperature Adjustment button. Temperature decreases with increments of 10° and finally, “-” symbol indicating the cold wash option appears on the display.

If you scroll to cold wash option and press Temperature Adjustment button again, the recommended temperature
for the selected programme appears on the display. Press the Temperature Adjustment button again to decrease the temperature.

**Economy symbol**
Indicates the programmes and temperatures that provide energy savings.

- Economy symbol can not be selected in Intensive and Hygiene programmes since washing is performed in long times and at high temperatures in order to provide hygiene. Similarly, Economy symbol can not be selected in Baby, Refresh, Drum Cleaning, Spin and Rinse programmes as well.

**Spin speed selection**
Whenever a new programme is selected, the recommended spin speed of the selected programme is displayed on the spin speed indicator.
To decrease the spin speed, press the Spin Speed Adjustment button. Spin speed decreases gradually.
Then, depending on the model of the product, "Rinse Hold" and "No Spin" options appear on the display. See "Auxiliary function selection" section for explanations of these options.

- Rinse Hold option is indicated with “ubre” symbol and No Spin option is indicated with “” symbol.

</tbody>
</table>

- : Selectable

* : Automatically selected, no canceling.

** : Energy Label programme (EN 60456 Ed.3)

*** If maximum spin speed of the machine is lower then this value, you can only select up to the maximum spin speed.

- : See the programme description for maximum load.

ℹ️ The auxiliary functions in the table may vary according to the model of your machine.

ℹ️ Water and power consumption may vary subject to the changes in water pressure, water hardness and temperature, ambient temperature, type and amount of laundry, selection of auxiliary functions and spin speed, and changes in electric voltage.

ℹ️ You can see the washing time of the programme you have selected on the display of the machine. It is normal that small differences may occur between the time shown on the display and the real washing time.
Auxiliary function selection
Select the desired auxiliary functions before starting the programme. Furthermore, you may also select or cancel auxiliary functions that are suitable to the running programme by pressing the Start / Pause / Cancel button when the machine is operating. For this, the machine must be in a step before the auxiliary function you are going to select or cancel.

Depending on the programme, press 2a, 2b, 2c or 2d buttons to select the desired auxiliary function. Symbol of the selected auxiliary function appears on the display.

- **Quicker Wash**
  A Prewash is only worthwhile for heavily soiled laundry. Not using the Prewash will save energy, water, detergent and time. F1 appears on the display when you select this function (a).

- **Quick Wash**
  This function can be used in Cottons and Synthetics programmes. It decreases the washing times and also the number of rinsing steps for lightly soiled laundry. F2 appears on the display when you select this function (b).

- **Rinse Plus**
  This function enables the machine to make another rinsing in addition to the one already made after the main wash. Thus, the risk for sensitive skins (babies, allergic skins, etc.) to be effected by the minimal detergent remnants on the laundry can be reduced. F3 appears on the display when you select this function (c).

- **Anticreasing**
  This function creases the clothes lesser when they are being washed. Drum movement is reduced and spinning speed is limited to prevent creasing. In addition, washing is done with a higher water level. F4 appears on the display when you select this function (d).

- **Rinse Hold**
  If you are not going to unload your clothes immediately after the programme completes, you may use rinse hold function to keep your laundry in the final rinsing water in order to prevent them from getting wrinkled when there is no water in the machine. Press Start / Pause / Cancel button after this process if you want to drain the water without spinning your laundry. Programme will resume and complete after draining the water. If you want to spin the laundry held in water, adjust the Spin Speed and press Start / Pause / Cancel button. The programme resumes. Water is drained, laundry is spun and the programme is completed.

- **Soaking**
  The Soaking auxiliary function ensures better removal of stains ingrained into the clothes by holding them in the detergent water prior to startup of the programme.

Some functions cannot be selected together. If a second auxiliary function conflicting with the first one is selected before starting the machine, the function selected first will be canceled and the second auxiliary function selection will remain active. For example, if you want to select Quick Wash after you have selected the Prewash, Prewash will be canceled and Quick Wash will remain active.

An auxiliary function that is not compatible with the programme cannot be selected. (See “Programme and consumption table”)

Auxiliary Function buttons may vary according to the model of the machine.
Time display
Remaining time to complete the programme appears on the display while the programme is running. Tim is displayed as “01:30” in hours and minutes format.

Programme time may differ from the values in the “Programme and consumption table” depending on the water pressure, water hardness and temperature, ambient temperature, amount and the type of laundry, auxiliary functions selected and the changes at the mains voltage.

Delayed start
With the Delayed Start function the startup of the programme may be delayed up to 24 hours. Delayed start time can be increased by increments of 30 minutes.

Do not use liquid detergents when you set Delayed Start! There is the risk of staining of the clothes.

1. Open the loading door, place the laundry and put detergent, etc.
2. Select the washing programme, temperature, spin speed and, if required, the auxiliary functions.
3. Set the desired delayed start time by pressing the Delayed Start + or - buttons. Delayed Start symbol flashes.

Additional laundry may be loaded during the delayed start period. At the end of the countdown, Delayed Start symbol disappears, washing cycle starts and the time of the selected programme appears on the display.

Changing the delayed start period
If you want to change the time during countdown:
1. Press Start / Pause / Cancel button. “:” sign in the middle of the delayed start time on the display stops flashing. Pause symbol appears. Delayed Start symbol flashes. Start symbol disappears.
2. Set the desired delayed start time by pressing the Delayed Start + or - buttons.
4. “:” sign in the middle of the delayed start time on the display starts flashing.

Canceling the Delayed Start function
If you want to cancel the delayed start countdown and start the programme immediately:
1. Press Start / Pause / Cancel button. “:” sign in the middle of the delayed start time on the display stops flashing.
2. Start symbol disappears. Pause symbol and Delayed Start symbol flashes.
3. Decrease the delayed start time by pressing the Delayed Start - button. Programme duration appears after 30 minutes.
4. Press Start / Pause / Cancel button to start the programme.

Starting the programme
1. Press Start / Pause / Cancel button to start the programme.
2. Start symbol showing the startup of the programme will turn on.
3. Loading door is locked and Door Locked symbol appears on the display.
4. The symbol of the step from which the programme has started appears on the display (Prewash, Main Wash, Rinse, Softener and Spin).

Progress of programme
Progress of a running programme is indicated on the display with a set of
symbols. Relevant symbol appears on the display at the beginning of each programme step and all symbols remain lit at the end of the programme. The farthestmost right symbol indicates the current programme step.

**Prewash**
If the Prewash auxiliary function is selected, Prewash symbol appears on the display indicating that the prewash step has started.

**Main Wash**
Main Wash symbol indicating that the main wash step has started appears on the display.

**Rinse**
Rinse symbol indicating that the rinsing step has started appears on the display.

**Softener**
Softener symbol indicating that the softener step has started appears on the display.

**Spin**
Appears at the beginning of the final spin step and remains lit during Spin and Pump special programmes.

If the machine does not pass to the spinning step, Rinse Hold function might be active or the automatic unbalanced load detection system might be activated due to the unbalanced distribution of the laundry in the machine.

**Loading door lock**
There is a locking system on the loading door of the machine that prevents opening of the door in cases when the water level is unsuitable. Door Locked symbol appears when the loading door is locked. This symbol will flash until the loading door becomes ready to open when programme completes or the machine is paused. Do not force to open the loading door in this step. Symbol disappears when the door is ready to open. You can open the door when the symbol disappears.

**Changing the selections after programme has started**

**Switching the machine to pause mode**
Press the Start / Pause / Cancel button to switch the machine to pause mode. Pause symbol appears on the display indicating that the machine is paused. Start symbol disappears.

**Changing the speed and temperature settings for auxiliary functions**
Depending on the step the programme has reached, you may cancel or activate the auxiliary functions; see, "Auxiliary function selection". You may also change the speed and temperature settings; see, "Spin speed selection" and "Temperature selection".

**Adding or taking out laundry**
1. Press the Start / Pause / Cancel button to switch the machine to pause mode. The programme follow-up light of the relevant step during which the machine was switched into the pause mode will flash.
2. Wait until the Loading Door can be opened.
3. Open the Loading Door and add or take out the laundry.
4. Close the Loading Door.
5. Make changes in auxiliary functions, temperature and speed settings if necessary.
6. Press Start / Pause / Cancel button to start the machine.

If the loading door will not open if the water temperature in the machine is high or the water level is above the door opening.

**Child Lock**
Use Child Lock function to prevent children from tampering with the machine. Thus you can avoid any changes in a running programme.
You can switch on and off the machine with On / Off button when the Child Lock is active. When you switch on the machine again, programme will resume from where it has stopped.

To activate the Child Lock:
Press and hold 2nd and 4th Auxiliary Function buttons for 3 seconds. “Con” appears on the display.

Same phrase will appear on the display if you press any button when Child Lock is enabled.
To deactivate the Child Lock:
Press and hold 2nd and 4th Auxiliary Function buttons for 3 seconds. “COFF” appears on the display.

Do not forget to disable the child lock at the end of the programme if it was enabled before. Otherwise, machine will not allow to select a new programme.

Canceling the programme
Press and hold Start / Pause / Cancel button for 3 seconds. Start symbol flashes. Symbol of the step at which the programme was cancelled remains lit. “End” appears on the display and the programme is cancelled.

If you want to open the loading door after you have cancelled the programme but it is not possible to open the loading door since the water level in the machine is above the loading door opening, then turn the Programme Selection knob to Pump+Spin programme and discharge the water in the machine.

Machine is in Rinse Hold mode
Spin symbol flashes and Pause symbol illuminates when the machine is in Rinse Hold mode.
If you want to spin your laundry when the machine is in this mode:
Adjust the spin speed and press Start / Pause / Cancel button. Pause symbol disappears and Start symbol appears. Programme resumes, discharges the water and spins the laundry.
If you only want to drain the water without spinning:
Just press Start / Pause / Cancel button. Pause symbol disappears. Start symbol appears. Programme resumes and discharges the water only.

End of programme
“End” appears on the display at the end of the programme. Symbols of the programme steps remain lit. Auxiliary function, spin speed and temperature that were selected at the beginning of the programme remain selected.
6 Maintenance and cleaning

Service life of the product extends and frequently faced problems decrease if cleaned at regular intervals.

Cleaning the detergent drawer
Remove any powder residue buildup in the drawer. To do this;

1. You can remove the detergent drawer by pulling it towards yourself strongly.
   - If more than a normal amount of softener and liquid detergent mixture starts to remain in the softener compartment, the siphon must be cleaned.
2. Wash the drawer and the siphon with plenty of lukewarm water in a washbasin. Wear protective gloves or use an appropriate brush to avoid touching the residues in the drawer when cleaning.
3. Replace the drawer into its housing after cleaning. Check if the siphon is in its original location.

Cleaning the loading door and the drum
Residues of softener, detergent and dirt may accumulate in your machine in time and may cause unpleasant odours and washing complaints. To avoid this, use the Drum Cleaning programme. If your machine is not featured with Drum Cleaning programme, use Cottons-90 programme and select Additional Water or Extra Rinse auxiliary functions as well. Before starting the programme, put max. 100 g of powder anti-limescale into the main wash detergent compartment (compartment nr. II). If the anti-limescale is in tablet form, put only one tablet into compartment nr. II. Dry the inside of the bellow with a clean piece of cloth after the programme has come to an end.
   - Repeat Drum Cleaning process in every 2 months.
   - Use an anti-limescale suitable for the washing machines. After every washing make sure that no foreign substance is left in the drum.

   If the holes on the bellow shown in the figure is blocked, open the holes using a toothpick.
   - Foreign metal substances in your machine will cause rust stains. Clean the stains on the drum surface by using cleaning agents for stainless steel. Never use steel wool or wire wool.

Cleaning the body and control panel
Wipe the body of the machine with soapy water or non-corrosive mild gel detergents as necessary, and dry with a soft cloth.
Use only a soft and damp cloth to clean the control panel.
   - Never use sponge or scrub materials. These will damage the painted and plastic surfaces.
Cleaning the water intake filters
There is a filter at the end of each water intake valve at the rear of the machine and also at the end of each water intake hose where they are connected to the tap. These filters prevent foreign substances and dirt in the water to enter the washing machine. Filters should be cleaned as they do get dirty.

1. Close the taps.
2. Remove the nuts of the water intake hoses to access the filters on the water intake valves. Clean them with an appropriate brush. If the filters are too dirty, take them out by means of pliers and clean them.
3. Take out the filters on the flat ends of the water intake hoses together with the gaskets and clean thoroughly under running water.
4. Replace the gaskets and filters carefully in their places and tighten the hose nuts by hand.

Draining remaining water and cleaning the pump filter
The filter system in your machine prevents solid items such as buttons, coins and fabric fibers clogging the pump impeller during discharge of washing water. Thus, the water will be discharged without any problem and the service life of the pump will extend.

If the machine fails to drain water, the pump filter is clogged. Filter must be cleaned whenever it is clogged or in every 3 months. Water must be drained off first to clean the pump filter.
In addition, prior to transporting the machine (e.g., when moving to another house) and in case of freezing of the water, water may have to be drained completely.

⚠️ Foreign substances left in the pump filter may damage your machine or may cause noise problem.

In order to clean the dirty filter and discharge the water:
1. Unplug the machine to cut off the supply power.

⚠️ Temperature of the water inside the machine may rise up to 90 °C. To avoid burning risk, filter must be cleaned after the water in the machine cools down.

2. Open the filter cap.
If the filter cap is composed of two pieces, press the tab on the filter cap downwards and pull the piece out towards yourself.

If the filter cap is one piece, pull the cap from both sides at the top to open.

⚠️ You can remove the filter cover by slightly pushing downwards with a thin plastic tipped tool, through the gap above the filter cover. Do not use metal tipped tools to remove the cover.

3. Some of our products have emergency draining hose and some does not have. Follow the steps below to discharge the water.
Discharging the water when the product has an emergency draining hose:
a. Pull the emergency draining hose out from its seat
b. Place a large container at the end of the hose. Drain the water into the container by pulling out the plug at the end of the hose. When the container is full, block the inlet of the hose by replacing the plug. After the container is emptied, repeat the above procedure to drain the water in the machine completely.
c. When draining of water is finished, close the end by the plug again and fix the hose in its place.
d. Turn the pump filter to take it out.

Discharging the water when the product does not have an emergency draining hose:

a. Place a large container in front of the filter to catch water from the filter.
b. Loosen pump filter (anticlockwise) until water starts to flow. Fill the flowing water into the container you have placed in front of the filter. Always keep a piece of cloth handy to absorb any spilled water.
c. When the water inside the machine is finished, take out the filter completely by turning it.

4. Clean any residues inside the filter as well as fibers, if any, around the pump impeller region.

5. Install the filter.

⚠️ If your product has a water jet feature, be sure to fit the filter into its housing in the pump. Never force the filter into its housing. Seat the filter into its place completely. Otherwise, water may leak from the filter cap.

6. If the filter cap is composed of two pieces, close the filter cap by pressing on the tab. If it is one piece, seat the tabs in the lower part into their places first, and then press the upper part to close.
### Troubleshooting

#### Programme cannot be started or selected.
- Washing machine has switched to self protection mode due to a supply problem (line voltage, water pressure, etc.). *Press and hold Start / Pause / Cancel button for 3 seconds to reset the machine to factory settings. (See "Canceling the programme")*

#### Water in the machine.
- Some water might have remained in the product due to the quality control processes in the production. *This is not a failure; water is not harmful to the machine.*

#### There is water leaking from the bottom of the washing machine.
- Likely problems with hoses or the pump filter. *Be sure the seals of the water inlet hoses are securely fitted. Attach the hose to the tap tightly.*
- Pump filter might not be closed fully. *Make sure that the pump filter is completely closed.*

#### Machine does not fill with water.
- Tap is turned off. *Open the inlet water taps fully.*
- Water inlet hose is bent. *Flatten the water inlet hose.*
- Water inlet filter is clogged. *Clean the water inlet filter.*
- The loading door is ajar. *Close the Loading Door.*

#### Machine does not drain water.
- Water drain hose might be clogged or twisted. *Clean or flatten the hose.*
- Pump filter is clogged. *Clean the pump filter.*

#### Machine vibrates or makes noise.
- Machine might be standing unbalanced. *Adjust the feet to level the machine.*
- A hard substance might have entered into the pump filter. *Clean the pump filter.*
- Transportation safety bolts are not removed. *Remove the transportation safety bolts.*
- Laundry quantity in the machine might be too little. *Add more laundry to the machine.*
- Machine might be overloaded with laundry. *Take out some of the laundry from the machine or distribute the load by hand to balance it homogenously in the machine.*
- Machine might be leaning on a rigid item. *Make sure that the machine is not leaning on anything.*

#### Machine stopped shortly after the programme started.
- Machine might have stopped temporarily due to low voltage. *It will resume running when the voltage restores to the normal level.*

#### Machine directly discharges the water it takes in.
- Draining hose might not be at adequate height. *Connect the water draining hose as described in the operation manual.*

#### No water can be seen in the machine during washing.
- The water level is not visible from outside of the washing machine. This is not a failure.
Loading door cannot be opened.

- Door lock is activated because of the water level in the machine. >>> *Drain the water by running the Pump or Spin programme.*
- Machine is heating up the water or it is at the spinning cycle. >>> *Wait until the programme completes.*
- Child lock is engaged. Door lock will be deactivated a couple of minutes after the programme has come to an end. >>> *Wait for a couple of minutes for deactivation of the door lock.*

Washing takes longer time than the one specified in the manual.

- Water pressure is low. >>> *Machine waits until taking in adequate amount of water to prevent poor washing quality due to the decreased amount of water. Therefore, the washing time extends.*
- Voltage might be low. >>> *Washing time is prolonged to avoid poor washing results when the supply voltage is low.*
- Input temperature of water might be low. >>> *Required time to heat up the water extends in cold seasons. Also, washing time can be lengthened to avoid poor washing results.*
- Number of rinses and/or amount of rinse water might have increased. >>> *Machine increases the amount of rinse water when good rinsing is needed and adds an extra rinsing step if necessary.*
- Excessive foam might have occurred and automatic foam absorption system might have been activated due to too much detergent usage. >>> *Use recommended amount of detergent.*

Machine does not switch to spinning step when the laundry is not evenly distributed in the drum to prevent any damage to the machine and to its surrounding environment. Laundry should be rearranged and re-spun.

Programme time does not countdown. (On models with display)

- Timer may stop during water intake. >>> *Timer indicator will not countdown until the machine takes in adequate amount of water. The machine will wait until there is sufficient amount of water to avoid poor washing results due to lack of water. Timer indicator will resume countdown after this.*
- Timer may stop during heating step. >>> *Timer indicator will not countdown until the machine reaches the selected temperature.*
- Timer may stop during spinning step. >>> *Automatic unbalanced load detection system might be activated due to the unbalanced distribution of the laundry in the drum.*

Programme time does not countdown.

- There might be an imbalance of laundry in the machine. >>> *Automatic unbalanced load detection system might be activated due to the unbalanced distribution of the laundry in the drum.*
- Machine does not switch to spinning step when the laundry is not evenly distributed in the drum to prevent any damage to the machine and to its surrounding environment. Laundry should be rearranged and re-spun.

**Colour of the clothes faded.**

- Excessive laundry was loaded in. >>> Do not load the machine in excess.
- Detergent in use is damp. >>> Keep detergents closed in an environment free of humidity and do not expose them to excessive temperatures.
- A higher temperature is selected. >>> Select the proper programme and temperature according to the type and soiling degree of the laundry.
- Regular drum cleaning is not applied. >>> Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".

**It does not rinse well.**

- The amount, brand and storage conditions of the detergent used are inappropriate. >>> Use a detergent appropriate for the washing machine and your laundry. Keep detergents closed in an environment free of humidity and do not expose them to excessive temperatures.
- Detergent is put in the wrong compartment. >>> If detergent is put in the prewash compartment although prewash cycle is not selected, machine can take this detergent during rinsing or softener step. Put the detergent in the correct compartment.
- Pump filter is clogged. >>> Check the filter.
- Drain hose is folded. >>> Check the drain hose.

**Laundry became stiff after washing.**

- Insufficient amount of detergent is used. >>> Using insufficient amount of detergent for the water hardness can cause the laundry to become stiff in time. Use appropriate amount of detergent according to the water hardness.
- Detergent is put in the wrong compartment. >>> If detergent is put in the prewash compartment although prewash cycle is not selected, machine can take this detergent during rinsing or softener step. Put the detergent in the correct compartment.
- Detergent might be mixed with the softener. >>> Do not mix the softener with detergent. Wash and clean the dispenser with hot water.
- Regular drum cleaning is not applied. >>> Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".

**Laundry does not smell like the softener.**

- Detergent is put in the wrong compartment. >>> If detergent is put in the prewash compartment although prewash cycle is not selected, machine can take this detergent during rinsing or softener step. Wash and clean the dispenser with hot water. Put the detergent in the correct compartment.
- Detergent might be mixed with the softener. >>> Do not mix the softener with detergent. Wash and clean the dispenser with hot water.
- Regular drum cleaning is not applied. >>> Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".
Detergent residue in the detergent drawer.

- Detergent is put in wet drawer. >>> *Dry the detergent drawer before putting in detergent.*
- Detergent has gotten damp. >>> *Keep detergents closed in an environment free of humidity and do not expose them to excessive temperatures.*
- Water pressure is low. >>> *Check the water pressure.*
- The detergent in the main wash compartment got wet while taking in the prewash water. Holes of the detergent compartment are blocked. >>> *Check the holes and clean if they are clogged.*
- There is a problem with the detergent drawer valves. >>> *Call the Authorized Service Agent.*
- Detergent might be mixed with the softener. >>> *Do not mix the softener with detergent. Wash and clean the dispenser with hot water.*
- Regular drum cleaning is not applied. >>> *Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".*

There is detergent left on the laundry.

- Excessive laundry was loaded in. >>> *Do not load the machine in excess.*
- Wrong programme and temperature were selected. >>> *Select the proper programme and temperature for the laundry to be washed.*
- Wrong detergent was used. >>> *Select the proper detergent for the laundry to be washed.*
- Regular drum cleaning is not applied. >>> *Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".*

Too much foam forms in the machine.

- Improper detergents for the washing machine are being used. >>> *Use detergents appropriate for the washing machine.*
- Excessive amount of detergent is used. >>> *Use only sufficient amount of detergent.*
- Detergent was stored under improper conditions. >>> *Store detergent in a closed and dry location. Do not store in excessively hot places.*
- Some meshed laundry such as tulle may foam too much because of their texture. >>> *Use smaller amounts of detergent for this type of item.*
- Detergent is put in the wrong compartment. >>> *Put the detergent in the correct compartment.*
- Softener is being taken early. >>> *There may be problem in the valves or in the detergent dispenser. Call the Authorized Service Agent.*
- Regular drum cleaning is not applied. >>> *Clean the drum regularly. For this, please see "Cleaning the loading door and the drum".*

Foam is overflowing from the detergent drawer.

- Too much detergent is used. >>> *Mix 1 tablespoonful softener and ½ l water and pour into the main wash compartment of the detergent drawer.*

Put detergent into the machine suitable for the programmes and maximum loads indicated in the “Programme and consumption table”. When you use additional chemicals (stain removers, bleaches and etc), reduce the amount of detergent.
