DOUBLE OVEN
GAS COOKER
BELLING 100 GDO

Instructions for use - Installation advice
Dear Customer,

Thank you for having purchased and given your preference to our product.

The safety precautions and recommendations reported below are for your own safety and that of others. They will also provide a means by which to make full use of the features offered by your appliance.

Please preserve this booklet carefully. It may be useful in future, either to yourself or to others in the event that doubts should arise relating to its operation.

This appliance must be used only for the task it has explicitly been designed for, that is for cooking foodstuffs. Any other form of usage is to be considered as inappropriate and therefore dangerous.

The manufacturer declines all responsibility in the event of damage caused by improper, incorrect or illogical use of the appliance.

Customer Care number: 0870 444 9939

IMPORTANT:
This appliance is designed and manufactured solely for the cooking of domestic (household) food and is not suitable for any non domestic application and therefore should not be used in a commercial environment.

The appliance guarantee will be void if the appliance is used within a non domestic environment i.e. a semi commercial, commercial or communal environment.

Read the instructions carefully before installing and using the appliance.

CAUTION: this appliance must only be installed in a permanently ventilated room in compliance with the applicable regulations.
IMPORTANT INSTRUCTIONS AND ADVICE FOR THE USE OF ELECTRICAL APPLIANCES

The use of any electrical appliance requires the compliance with some basic rules, namely:

– do not touch the appliance with wet or damp hands (or feet)
– do not use the appliance whilst in bare feet
– do not allow the appliance to be operated by children or unqualified persons without supervision.

The manufacturer cannot be deemed responsible for damages caused by wrong or incorrect use.

FIRST USE OF THE OVENS

It is advised to follow these instructions:

– Furnish the interior of the ovens by placing the wire racks as described at chapter “Cleaning and maintenance”.
– Insert shelves and tray.
– Switch on the empty ovens on max to eliminate grease from the heating elements.
– Let the ovens cool down and clean the interior of the ovens with a cloth soaked in water and neutral detergent, then dry carefully.

DECLARATION OF CE CONFORMITY

This cooker has been designed, constructed, and marketed in compliance with:

- Safety requirements of the "Gas" Directive 90/396/EEC;
- Safety requirements of EEC Directive “Low voltage” 73/23;
- Safety requirements of EEC Directive “EMC” 89/336;
- Requirements of EEC Directive 93/68.
IMPORTANT SAFEGUARDS AND RECOMMENDATIONS

After unpacking the appliance, check to ensure that it is not damaged and that the oven doors close correctly. If in doubt, do not use and consult your supplier or a professionally qualified technician.

Packing materials (i.e. plastic bags, polystyrene foam, nails, packing straps, etc.) should not be left around within easy reach of children, as these may cause serious injuries.

● ATTENTION: please peel plastic cover off both sides and front of the oven before use.

● Do not attempt to modify the technical characteristics of the appliance as this may cause danger to users.

● Do not carry out any cleaning or maintenance operations on the appliance without first disconnecting it from the electric power supply.

● If you should decide not to use this appliance any longer (or decide to substitute an older model), before disposing of it, it is recommended that it is made inoperative in an appropriate manner in accordance to health and environmental protection regulations, ensuring in particular that all potentially hazardous parts be made harmless, especially in relation to children who could play with unused appliances.

● After use, always ensure that the control knobs are in the off position.

● Do not allow young children or infirm persons to use the appliance without your supervision.

● During and after use of the cooker, certain parts will become very hot. Do not touch hot parts.

● Keep children away from the cooker when it is in use.

● Some appliances are supplied with a protective film on steel and aluminium parts. This film must be removed before using the appliance.

● WARNING

When correctly installed, your product meets all safety requirements laid down for this type of product category. However special care should be taken around the rear or the underneath of the appliance as these areas are not designed or intended to be touched and may contain sharp or rough edges, that may cause injury.

● Fire risk! Do not store flammable material in the ovens or in the storage compartment.

● Make sure that electrical cords connecting other appliances in the proximity of the cooker cannot come into contact with the hob or become entrapped in the oven doors.

● Do not line the oven walls with aluminium foil. Do not place baking trays or the drip tray on the base of the oven chamber.

● The manufacturer declines all liability for injury to persons or damage to property caused by incorrect or improper use of the appliance.

● The various components of the appliance are recyclable. Dispose of them in accordance with the regulations in force in your country. If the appliance is to be scrapped, remove the power cord.

● Always use oven gloves when removing the shelves and food trays from the oven whilst hot.

● Do not hang towels, dishcloths or other items on the cooker or its handle – as this could be a fire hazard.

● Clean the oven regularly and do not allow fat or oils to build up in the oven base or trays. Remove spillages as soon as they occur.

● Do not stand on the cooker or on the open oven doors.

● Always stand back from the cooker when opening the oven door to allow steam and hot air to escape before removing the food.

● This appliance is for domestic use only.
COOKING HOB

1. Auxiliary burner (A) 1,00 kW
2. Semi-rapid burner (SR) 1,75 kW
3. Rapid burner (R) 3,00 kW
4. Triple-ring burner (TR) 3,50 kW

Important Note:
The electric ignition is incorporated in the knobs.
CONTROL PANEL - Controls description

1. Left main oven - Gas oven/gas grill control knob
2. Electronic clock
3. Front left burner control knob
4. Rear left burner control knob
5. Front central burner control knob
6. Rear central burner control knob
7. Rear right burner control knob
8. Front right burner control knob
9. Right small oven - Gas oven/gas grill control knob
GAS BURNERS

Each burner is controlled by a gas tap assuring the opening and the closing of the gas supply. Make the lever of the knob match with the indicator on the control panel to obtain:

- symbol ● : off
- symbol ★ : full on (nominal rate)
- symbol ☼ : reduced rate

- The maximum aperture position permits rapid boiling of liquids, whereas the minimum aperture position allows slower warming of food or maintaining boiling conditions of liquids.

- To reduce the gas flow to minimum, rotate the knob further anti-clockwise to the small flame symbol.

- Other intermediate operating adjustments can be achieved by positioning the indicator between the maximum and minimum aperture positions, and never between the maximum aperture and closed positions.

N.B. When the cooker is not being used, set the gas knobs to their closed positions and also close the cock valve on the gas bottle or the main gas supply line.

Caution!
the cooking hob becomes very hot during operation.
Keep children well out of reach.
LIGHTING THE BURNERS

To ignite the burner, the following instructions are to be followed:

1) Lightly press and turn the knob anti-clockwise (fig. 3.2), and position the knob symbol ★ to the indicator printed on the control panel (fig. 3.1).

2) Press the knob to operate the electric ignition; or, in the case of a mains failure light the burner with a match or lighted taper.

3) Adjust the burner according to the setting required.

CHOICE OF THE BURNER

On the control panel, near each knob, there is a diagram that indicates which burner is controlled by that knob. Select the burner that is most suitable for the diameter and capacity of the pan to be used. As an indication, the burners and the pans must be used in the following way:

<table>
<thead>
<tr>
<th>BURNERS</th>
<th>POT DIAMETER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auxiliary</td>
<td>12 - 14 cm</td>
</tr>
<tr>
<td>Semi-rapid</td>
<td>16 - 24 cm</td>
</tr>
<tr>
<td>Rapid</td>
<td>24 - 26 cm</td>
</tr>
<tr>
<td>Triple-ring</td>
<td>26 - 28 cm</td>
</tr>
<tr>
<td><strong>do not use pans with concave or convex bases</strong></td>
<td></td>
</tr>
</tbody>
</table>

It is important that the base diameter of the pot is at least the same diameter as the burner ring to obtain an efficient heat transfer. Always position pans centrally over the burners. Adjust the size of the flame so that it does not lick up the side of the pan. Position pan handles so that they cannot be accidentally knocked.
Attention: the oven door becomes very hot during operation.
Keep children away.

GENERAL FEATURES
The oven is furnished completely clean; it is advisable, however, upon first use, to turn the oven on to the maximum temperature (position 9*) to eliminate possible traces of grease from the oven burner.
The same operation should be followed for grill burner.

The gas oven is provided with two burners:
a) Oven burner, mounted on the lower part of the oven (wattage: 3.70 kW)
b) Grill burner, mounted on the upper part of the oven (wattage: 2.50 kW).

OVEN BURNER
This burner carries out the normal “oven cooking”. The gas flow to the burner is regulated by a thermostat which maintains the oven at a constant temperature.
The temperature of the oven is controlled by a thermostatic probe positioned inside the oven.
The probe must always be kept in its housing, in a clean condition, as an incorrect position or encrustment may cause an alteration in the control of the temperature.

WARNING:
The door is hot, use the handle.
During use the appliance becomes hot. Care should be taken to avoid touching heating elements inside the oven.

TEMPERATURE CONTROL
The temperature knob is numbered from 1 to 9* (fig. 4.1) indicating the increasing oven temperature value (see table 4.2).
The thermostat which regulates the flow of gas to the oven burner has a safety valve which automatically shuts off the gas supply when the flame goes out. The temperature is kept constant on the regulated value.

IGNITION OF THE OVEN BURNER

1) Open the oven door to the full extent.

**WARNING:** Risk of explosion! The oven door must be open during this operation.

2) Lightly press and turn the temperature knob anti-clockwise (fig. 4.3) to the max position (9* fig. 4.1).

3) Press the knob firmly until the burner lights.

**Never continue this operation for more than 15 seconds.** If the burner has still not ignited, wait for about 1 minute prior to repeating the ignition.

In case of mains failure, press the knob firmly and immediately put a lit match or taper to the opening “F” (fig. 4.4).

4) Wait about 10/15 seconds after the burner lights before releasing the knob (time to prime the valve).

5) Close the oven door slowly and adjust the burner according to the power required.

If the flame extinguishes for any reason, the safety valve will automatically shut off the gas supply to the burner.

To re-light the burner, first turn the oven control knob to position ●, **wait for at least 1 minute** and then repeat the lighting procedure.

---

OVEN COOKING

For efficient oven preheating, we recommend that grill trays and racks are removed from the oven and replaced after about 15 minutes.

Before introducing the food, preheat the oven to the desired temperature.

For a correct preheating operation, it is advisable to remove the tray from the oven and introduce it together with the food, when the oven has reached the desired temperature.

Check the cooking time and turn off the oven 5 minutes before the theoretical time to recuperate the stored heat.
**IGNITION OF THE GRILL BURNER**

**IMPORTANT:** the grill must always be used with the oven door ajar and with shield "A" mounted (fig. 4.7).

Do not grill with the oven door closed.

Attention: the oven door becomes very hot during operation.

Keep children away.

**WARNING.** The heat shield and the oven door reach a very high temperature whilst in use.

---

1) **Open the oven door to the full extent.**

   **WARNING:** Risk of explosion! The oven door must be open during this operation.

2) Lightly press and turn the temperature knob clockwise (fig. 4.5) to the position (fig. 4.1).

3) Press the knob firmly until the burner lights.

   **Never continue this operation for more than 15 seconds. If the burner has still not ignited, wait for about 1 minute prior to repeating the ignition.**

   In case of mains failure, press the knob firmly and put a lit match or taper to the pipe of the burner (fig. 4.6).

4) After lighting the burner, wait a few seconds before releasing the knob (until the safety valve stays open).

   Do not close the oven door completely. The grill must always be used with the oven door slightly open and with shield "A" mounted (Fig. 4.7).

   See specific instructions in the section ‘USE OF THE GRILL’.

---

If the flame extinguishes for any reason, the safety valve will automatically shut off the gas supply to the burner.

To re-light the burner, first turn the oven control knob to position ●, **wait for at least 1 minute and then repeat the lighting procedure.**
USE OF THE GRILL

Very important: the grill must always be used with the oven door slightly open and with shield "A" mounted (Fig. 4.7).

Mount shield “A” which serves to protect the control panel from the heat.

Turn on the grill, as explained in the preceding paragraphs and let the oven preheat for about 5 minutes with the door ajar.

Introduce the food to be cooked, positioning the rack as close to the grill as possible.

The drip tray should be placed under the rack to catch the cooking juices and fats.

Note: It is recommended that you do not grill for longer than 30 minutes at any one time (Grilling for longer than the recommended time may mean the appliance overheats).

Attention: the oven door becomes very hot during operation.
Keep children away.

Notes:
– The grill burner has only one setting, that is full-on.
– It is important that the heat shield is fitted the correct way up, as shown in the figure 4.7.

IMPORTANT WARNING

For best results when using the grill, place the shelf on the second level and when using the grill pan handle avoid contact with the heat shield which will be HOT during use.

OVEN LIGHT

The oven is equipped with a light that illuminates the oven to enable visually controlling the food that is cooking.
This light is controlled by the oven/grill control knob (fig. 4.1)
It remains on in all the cooking modes.
GRILL PAN AND BAKING TRAY

Grilling
In order to get the best results from your grill, please grill in the grill area - as shown in the illustration 4.8 - this will given the most even results in the shortest time.

Baking
In order to achieve optimum results while baking, we recommend that you place your baking tin / tray on top of the grill pan and grid inside the oven. This will ensure that even baking results are achieved.
You can then place the grill pan in the shelf position you require as shown the recipe you are using.
Please be aware that as with all cooking, results depend on personal taste - always check your food regularly.
**GENERAL FEATURES**

The oven is furnished completely clean; it is advisable, however, upon first use, to turn the oven on to the maximum temperature (position 9*) to eliminate possible traces of grease from the oven burner.

The same operation should be followed for grill burner.

The gas oven is provided with two burners:

a) Oven burner, mounted on the lower part of the oven (wattage: 2.20 kW)

b) Grill burner, mounted on the upper part of the oven (wattage: 2.00 kW).

**OVEN BURNER**

This burner carries out the normal “oven cooking”. The gas flow to the burner is regulated by a thermostat which maintains the oven at a constant temperature.

The temperature of the oven is controlled by a thermostatic probe positioned inside the oven.

The probe must always be kept in its housing, in a clean condition, as an incorrect position or encrustment may cause an alteration in the control of the temperature.

**WARNING:**

The door is hot, use the handle.

During use the appliance becomes hot. Care should be taken to avoid touching heating elements inside the oven.

**TEMPERATURE CONTROL**

The temperature knob is numbered from 1 to 9* (fig. 5.1) indicating the increasing oven temperature value (see table 5.2).

The thermostat which regulates the flow of gas to the oven burner has a safety valve which automatically shuts off the gas supply when the flame goes out.

The temperature is kept constant on the regulated value.

IGNITION OF THE OVEN BURNER

1) **Open the oven door to the full extent.**

   **WARNING:** Risk of explosion! The oven door must be open during this operation.

2) Lightly press and turn the temperature knob anti-clockwise (fig. 5.4) to the max position (9 fig. 5.1).

3) Press the knob firmly until the burner lights.

   **Never continue this operation for more than 15 seconds. If the burner has still not ignited, wait for about 1 minute prior to repeating the ignition.**

   In case of mains failure, press the knob firmly and immediately put a lit match or taper to the opening “F” (fig. 5.3).

4) Wait about 10/15 seconds after the burner lights before releasing the knob (time of priming of the valve).

5) Close the oven door slowly and adjust the burner according to the power required.

If the flame extinguishes for any reason, the safety valve will automatically shut off the gas supply to the burner.

To re-light the burner, first turn the oven control knob to position ●, **wait for at least 1 minute and then repeat the lighting procedure.**

---

OVEN COOKING

Before introducing the food, preheat the oven to the desired temperature.

For a correct preheating operation, it is advisable to remove the tray from the oven and introduce it together with the food, when the oven has reached the desired temperature.
IGNITION OF THE GRILL BURNER

IMPORTANT: the grill must always be used with the oven door ajar and with shield “B” mounted (fig. 5.7).
Do not grill with the oven door closed.
Attention: the oven door becomes very hot during operation.
Keep children away.
WARNING. The heat shield and the oven door reach a very high temperature whilst in use.

1) Open the oven door to the full extent.
   WARNING: Risk of explosion! The oven door must be open during this operation.

2) Lightly press and turn the temperature knob clockwise (fig. 5.5) to the position (fig. 5.1).
3) Press the knob firmly until the burner lights.
   Never continue this operation for more than 15 seconds. If the burner has still not ignited, wait for about 1 minute prior to repeating the ignition.

In case of mains failure, press the knob firmly and put a lit match or taper to the pipe of the burner (fig. 5.6).

3) After lighting the burner, wait a few seconds before releasing the knob (until the safety valve stays open).
   Do not close completely the oven door. The grill must always be used with the oven door slightly open and with shield “B” mounted (fig. 5.7).
   See specific instructions in the section ‘USE OF THE GRILL’.

If the flame extinguishes for any reason, the safety valve will automatically shut off the gas supply to the burner.
To re-light the burner, first turn the oven control knob to position ●, wait for at least 1 minute and then repeat the lighting procedure.
USE OF THE GRILL

Very important: the grill must always be used with the oven door slightly open and with shield "B" mounted (fig. 5.7).

Mount shield “B” which serves to protect the control panel from the heat.

Turn on the grill, as explained in the preceding paragraphs and let the oven preheat for about 5 minutes with the door ajar.

Introduce the food to be cooked, positioning the rack as close to the grill as possible.

The drip tray pan should be placed under the rack to catch the cooking juices and fats.

Note: It is recommended that you do not grill for longer than 30 minutes at any one time (Grilling for longer than the recommended time may mean the appliance overheats).

Attention: the oven door becomes very hot during operation. Keep children away.

Notes:
– The grill burner has only one setting, that is full-on.
– It is important that the heat shield is fitted the correct way up, as shown in the figure 5.7.

IMPORTANT WARNING

For best results when using the grill, place the shelf on the second level and when using the grill pan handle avoid contact with the heat shield which will be HOT during use.
**GRILL PAN AND BAKING TRAY**

**Grilling**
In order to get the best results from your grill, please grill in the grill area - as shown in the illustration 5.8 - this will given the most even results in the shortest time.

**Baking**
In order to achieve optimum results while baking, we recommend that you place your baking tin / tray on top of the grill pan and grid inside the oven. This will ensure that even baking results are achieved.

You can then place the grill pan in the shelf position you require as shown the recipe you are using.

Please be aware that as with all cooking, results depend on personal taste - always check your food regularly.
Temperature and times given are approximate, as they will vary depending on the quality and amount of food being cooked.

Remember to use ovenproof dishes and to adjust the oven temperature during cooking if necessary.

ELECTRONIC CLOCK

This appliance comes with an electronic 24 hour clock with minute minder.

SETTING THE TIME OF DAY

Once connected to the electricity supply, the display will show 0.00.

Press the function button, and then use the plus \( \Delta \) and minus \( \nabla \) buttons to set the correct time of day.

We advise that you do this as soon as your appliance is operational.

In the event of a power cut, or if the appliance is unplugged, you will need to re-set the time of day once power is restored.

USING THE MINUTE MINDER

The minute minder can be set for a maximum of 99 minutes.

To set the minute minder, press the plus \( \Delta \) and minus \( \nabla \) buttons until the desire length of time is set. The bell symbol will illuminate, and the countdown will begin immediately.

At the end of the time period, an alarm will sound. Press the plus \( \Delta \) button to turn the alarm off.

Note: The alarm will sound for a maximum of 7 minutes.

To cancel the minute minder at any time, press the plus \( \Delta \) and minus \( \nabla \) buttons together for a few seconds - then release the plus \( \Delta \) button first.

Important note: This facility is a minute minder alarm only. The appliance will remain operational once the time has elapsed. You must switch the appliance off manually when cooking has finished.

TO SELECT A TONE

There are three tones to chose from.

To chose a tone which best suits your needs, press the minus \( \nabla \) button to listen to the tone.

When the minus \( \nabla \) button is released, the last tone listened to is selected.
**GENERAL ADVICE**

- When the appliance is not being used, it is advisable to keep the gas tap closed.

- Every now and then check to make sure that the flexible tube that connects the gas line or the gas cylinder to the appliance is in perfect condition and get it replaced if it shows any signs of wearing or damage.

- The periodical lubrication of the gas taps must be done only by specialised personnel.

- If a tap becomes stiff, do not force; contact your local Service Centre.

- **Important:**
  the use of suitable protective clothing/gloves is recommended when handling or cleaning of this appliance.

---

**IMPORTANT NOTES**

Installation, and any demonstration, information or adjustments are not included in the warranty.

The cooker must be installed by a qualified person in accordance with the Gas Safety (Installation and Use) (Amendment) Regulations 1990 and the relevant building/I.E.E Regulations.

Failure to install the appliance correctly could invalidate any manufacturers warranty and lead to prosecution under the above quoted regulation.

In the UK C.O.R.G.I registered installers are authorised to undertake the installation and service work in compliance with the above regulations.
ENAMELLED PARTS

All the enamelled parts must be cleaned with a sponge and soapy water or other non-abrasive products. Dry preferably with a soft cloth. Acidic substances like lemon juice, tomato sauce, vinegar etc. can damage the enamel if left in contact for too long.

REPLACING THE OVEN LIGHT BULB (LEFT MAIN OVEN ONLY)

Switch the cooker off at the mains. When the oven is cool, unscrew and replace the bulb with another one resistant to high temperatures (300°C), voltage 230 V (50 Hz), 15 W, E14. Note: Oven bulb replacement is not covered by your guarantee.

STAINLESS STEEL, ALUMINIUM PARTS AND SILK-SCREEN PRINTED SURFACES

Clean using an appropriate product. Always dry thoroughly.

IMPORTANT: these parts must be cleaned very carefully to avoid scratching and abrasion. You are advised to use a soft cloth and neutral soap. CAUTION: Do not use abrasive substances or non-neutral detergents as these will irreparably damage the surface.

GAS TAPS

In the event of operating faults in the gas taps, call the After Sales Service Department.

FLEXIBLE TUBE

From time to time, check the flexible tube connecting the gas supply to the cooker. It must be always in perfect condition; in case of damage arrange for it to be replaced by a C.O.R.G.I. registered installer.

WARNING

When correctly installed, your product meets all safety requirements laid down for this type of product category. However special care should be taken around the rear or the underneath of the appliance as these areas are not designed or intended to be touched and may contain sharp or rough edges, that may cause injury.
**BURNERS**

The burners can be removed and washed with soapy water only. They will remain perfect if always cleaned with products used for silverware. After cleaning, check that the burner-caps and burner-heads are dry before placing them in the respective housings.

**Note:**
- Do not clean burners in a dishwasher.
- To avoid damage to the electric ignition do not use it when the burners are not in place.

**CORRECT REPLACEMENT OF THE BURNERS**

It is very important to check that the burner flame distributor F and the cap C has been correctly positioned (see figs. 8.1 - 8.2) - failure to do so can cause a poor burner flame and/or damage to the burner and hob.

Check that the electrode “S” (fig. 8.1) is always clean to ensure trouble-free sparking.
TRIPLE RING BURNER

The triple ring burner must be correctly positioned (see fig. 8.3); the burner rib must be enter in their logement as shown by the arrow.

The burners must be correctly positioned so that they cannot rotate (fig. 8.4).

Then position the cap A and the ring B (fig. 8.4 - 8.5).
OVEN DOOR
The internal glass panel can be easily removed for cleaning by unscrewing the 2 retaining screws (Fig. 8.6)

STORAGE COMPARTMENT
The storage compartment is accessible through the pivoting panel (fig. 8.7).

Do not store flammable material in the oven or in the storage compartment.

Fig. 8.6

Fig. 8.7
**REMOVABLE BOTTOM STAINLESS STEEL PANEL**

The cooker is fitted with a removable bottom stainless steel panel to facilitate the cleaning under the appliance.

**REMOVING THE PANEL**

Grip the panel as indicated in fig. 8.8 and remove it by pulling toward the outside.

**IMPORTANT**: to avoid damage never grip the panel in the central part.
Always operate on the sides (in proximity of the fixing brackets) by using both hands.
Unhook both fixing hooks at the same time.

**REPLACING THE PANEL**

Grip the panel as indicated in fig. 8.9 and fix it by pressing toward the inside.
The hooks “B” have to be placed on the opening “C” of the fixing brackets.

**IMPORTANT**: to avoid damage never grip the panel in the central part.
Always operate on the sides (in proximity of the fixing brackets) by using both hands.
ASSEMBLY AND DISMANTLING OF THE SIDE RUNNER FRAMES

- Fit the side runner frames into the holes on the side walls inside the oven (Fig. 8.10).
- Slide the tray and rack into the runners (Fig. 8.11). The shelf must be fitted so that the safety catch, which stops it sliding out, faces the inside of the oven.
- To dismantle, operate in reverse order.

INSIDE OF OVEN

This must be cleaned after every use. Remove and refit the side runner frames as described on the next chapter. Wipe the inside walls with a cloth soaked in very hot soapy water or another suitable product. The bottom of the oven, side runner frames, tray and rack can be removed and washed.
REMOVING THE OVEN DOOR

The oven door can easily be removed as follows:

– Open the door to the full extent (fig. 8.12A).

– Attach the retaining rings to the hooks on the left and right hinges (fig. 8.12B).

– Hold the door as shown in fig. 8.12.

– Gently close the door and withdraw the lower hinge pins from their location (fig. 8.12C).

– Withdraw the upper hinge pins from their location (fig. 8.12D).

– Rest the door on a soft surface.

– To replace the door, repeat the above steps in reverse order.
Advice for the Installer

**IMPORTANT**

- Cooker installation must only be carried out by QUALIFIED TECHNICIANS and in compliance with local safety standards. Failure to observe this rule will invalidate the warranty.

- The appliance must be installed in compliance with regulations in force in your country and in observation of the manufacturer's instructions.

- Always unplug the appliance before carrying out any maintenance operations or repairs.

- The surfaces of adjacent furniture and walls must be capable of withstanding temperatures in excess of 75°C. If the cooker is installed adjacent to furniture which is higher than the gas hob cooktop, a gap of at least 200 mm must be left between the side of the cooker and the furniture.

- Some appliances are supplied with a protective film on steel and aluminium parts. **This film must be removed before using the cooker.**

- Important: the use of suitable protective clothing/gloves is recommended when handling or installing of this appliance.
The cooker must be installed by a qualified technician and in compliance with local safety standards.

This cooker has class “2/1” overheating protection so that it can be installed next to a cabinet.

If the cooker is installed adjacent to furniture which is higher than the gas hob cooktop, a gap of at least 200 mm must be left between the side of the cooker and the furniture. The furniture walls adjacent to the cooker must be made of material resistant to heat. The veneered synthetical material and the glue used must be resistant to a temperature of 90°C in order to avoid ungluing or deformations.

The cooker may be located in a kitchen, a kitchen/diner or bed-sitting room but not in a room containing a bath or shower.

Curtains must not be fitted immediately behind appliance or within 500 mm of the sides.

If the cooker is located on a pedestal it is necessary to provide safety measures to prevent falling out.

It is essential that the cooker is positioned as stated below.
LEVELLING THE COOKER

The cooker is equipped with 4 LEVELLING FEET and may be levelled by screwing or unscrewing the feet with a spanner (fig. 9.2).

It is important to observe the prescriptions of figures 9.3 - 9.4.

Supplied with the appliance in a separate kit
**BACKGUARD**

Before installing the cooker, assemble the backguard “C” (fig. 9.5).

– The backguard “C” can be found packed at the rear of the cooker.
– Before assembling remove any protective film/adhesive tape.
– Remove the two spacers “A” and the screw “B” from the rear of the cooktop.
– Assemble the backguard as shown in figure 9.5 and fix it by screwing the central screw “B” and the spacers “A”.

![Fig. 9.5](image-url)
**MOVING THE COOKER**

**WARNING**
When raising cooker to upright position always ensure two people carry out this manoeuvre to prevent damage to the adjustable feet and the sides (fig. 9.6).

**WARNING**
Be careful: **DO NOT LIFT** the cooker by the door handle when raising to the upright position (fig. 9.7).

**WARNING**
When moving cooker to its final position **DO NOT DRAG** (fig. 9.8).
Lift feet clear of floor (fig. 9.6).
PROVISION FOR VENTILATION

The room containing the cooker should have an air supply in accordance with BS.5540: Part 2: 1989.

All rooms require an openable window or equivalent while some rooms require a permanent vent in addition to the openable window.

The cooker should not be installed in a bed-sitting room, of volume less than 21 m³.

Where a DOMESTIC COOKER is installed in a room or internal space, that room or internal space shall be provided with a permanent opening which communicates directly with outside air and is sized in accordance with the table below. In domestic premises the permanent opening shall be an air vent.

If there are other fuel burning appliances in the same room, BS.5540: Part 2: 1989 should be consulted to determine the requisite air vent requirements.

If the cooker is installed in a cellar or basement, it is advisable to provide an air vent of effective area 100 cm², irrespective of the room volume.

(※) If the room or internal space containing these appliances has a door which opens directly to outside, no permanent opening is required.
GAS INSTALLATION

IMPORTANT NOTE

This appliance is supplied for use on NATURAL GAS only and cannot be used on any other gas without modification.

This appliance is manufactured for conversion to LPG if required.
If the injectors are not supplied they can be obtained from the After-Sales Service.

The cooker must be installed by a qualified person in accordance with the Gas Safety (Installation and Use) (Amendment) Regulation 1990 and the relevant building/L.E.E. Regulations.

The following British Standards should be used as reference when installing this appliance.

Failure to install the appliance correctly could invalidate any manufacturers warranty and lead to prosecution under the above quoted regulation.

In the UK C.O.R.G.I registered installers are authorised to undertake the installation and service work in compliance with the above regulations.

GAS CONNECTION

The installation of the cooker to Natural Gas or LP Gas must be carried out by a qualified gas engineer. Installers shall take due account of the provisions of the relevant British Standards Code of Practice, the Gas Safety Regulations and the Building Standards (Scotland) (Consolidation) Regulations issued by the Scottish Development Department.

INSTALLATION TO NATURAL GAS

Installation to Natural Gas must conform to the Code of Practice, etc. The supply pressure for Natural Gas is 20 mbar.

INSTALLATION TO LP GAS

This appliance must only be connected to LPG after an LPG conversion kit has been fitted, (see page 38-44).
When operating on Butane gas a supply pressure of 28-30 mbar is required.
When using Propane gas a supply pressure of 37 mbar is required.
The installation must conform to the relevant British Standards.

Warning: Only a qualified gas engineer, also with technical knowledge of electricity should install the cooker. He should observe the Regulations and Codes of Practice governing such installation of gas cookers.

Note: It is recommended that the gas connection to the cooker is installed with a flexible connecting tube made to BS 5386.
**GAS CONNECTION**

The gas supply must use the nearest gas inlet pipe which is located at the left or the right hand side at the rear of the appliance (fig. 10.2).

**IMPORTANT NOTE:** Before connecting the appliance to the gas mains fit the female connector (supplied with the appliance in a separate kit) to the right or the left inlet pipe interposing the gasket. Check the correct positioning of the connector as per pictures and always operate using two suitable spanners.

The unused end inlet pipe must be closed with the plug interposing the gasket.

Flexible hoses can be used where the sited ambient temperature of the hose does not exceed 70°C. These hoses must be manufactured in accordance with BS669 part 1 and be of the correct construction for the type of gas being used.

The hose should not be crushed or trapped or be in contact with sharp or abrasive edges. It should also not be subjected to corrosion by acidic cleansing agents.

The hose should also be connected in such away that it does not touch the floor.

NB: Gas hoses designed for natural gas MUST NOT be used for supplying LPG gas (LPG gas hoses can be identified by a either a red band or stripe on the rubber outer coating of the hose).

To avoid damage to the appliance gas rail inlet pipe the fittings should be tightened using two suitable spanners (fig. 10.1).

After connection to the mains gas supply the couplings should be checked for gas soundness/tightness as per current regulations for the gas type being used.

*Fig. 10.1*
IMPORTANT PRESCRIPTIONS FOR GAS CONNECTION

Fig. 10.2

Fig. 10.3
GAS MAINTENANCE

INJECTORS REPLACEMENT OF THE TOP BURNERS

If the injectors are not supplied they can be obtained from the Service Centre.

Select the injectors to be replaced according to the “Table for the choice of the injectors”.

The nozzle diameters, expressed in hundredths of a millimetre, are marked on the body of each injector.

To replace the injectors proceed as follows:
- Remove pan supports and burners from the cooktop.
- Using a wrench, substitute the nozzle injectors “J” (fig. 10.4, 10.5) with those most suitable for the kind of gas for which it is to be used.

The burners are conceived in such a way so as not to require the regulation of the primary air

ADJUSTING OF THE MINIMUM OF THE TOP BURNERS

In passing from one type of gas to another, the gas flow must also be changed, considering that in this position the flame must have a length of about 4 mm and must remain lit even with a brusque passage from the maximum position to that of minimum.

The flame adjustment is done in the following way:
- Turn on the burner.
- Turn the tap to the MINIMUM position
- Take off the knob.

With a small flat screwdriver turn the screw inside the tap rod to the correct regulation (fig. 10.6).

For G 30/ G 31 gas, tighten up the regulation screw.

LEFT OVEN

OVEN BURNER AND GRILL BURNER
REPLACEMENT OF INJECTORS

a) oven burner

– Lift and remove the lower panel inside the oven.

– Remove the burner securing screw (fig. 10.7).

– Withdraw the burner as shown in figure 10.8 and rest it inside the oven. Take care not to damage the wire to the ignition electrode and the safety valve probe.

– Using a 7 mm box spanner, unscrew the injector (indicated by the arrow in fig. 10.8) and replace it by the proper one according to the kind of gas. Then replace the burner repeating the above steps in reverse order.

b) grill burner

– Remove the burner by unscrewing the front screw (fig. 10.9). Gently suspend the burner as shown in figure 10.10. Be careful not to damage the wire of the electric ignition and the probe of the safety valve.

– Using a 7 mm box spanner, replace the injector (indicated by the arrow in fig. 10.10) by the proper one according to the kind of gas.

– Replace the burner repeating the above steps in reverse order.
REGULATION OF AIR SUPPLY TO OVEN AND GRILL BURNERS

Using a cross-head screwdriver, slacken the screw securing the air flow regulation collar (fig. 10.11 and 10.12) and move the collar forward or backward to increase or reduce the air aperture in accordance with gas type and the indications in the “TABLE FOR THE CHOICE OF THE INJECTORS”. Light the burner and check the flame.
RIGHT OVEN

OVEN BURNER AND GRILL BURNER REPLACEMENT OF INJECTORS

a) oven burner

– Lift and remove the lower panel inside the oven.

– Remove the 2 screws securing the burner (fig. 10.13).

– Withdraw the burner as shown in figure 10.14 and rest it inside the oven. Take care not to damage the wire to the ignition electrode and the safety valve probe.

– Using a 7 mm box spanner, unscrew the injector (indicated by the arrow in fig. 10.14) and replace it by the proper one according to the kind of gas. Then replace the burner repeating the above steps in reverse order.

b) grill burner

– Remove the burner by unscrewing the front screw (fig. 10.15). Gently suspend the burner as shown in figure 10.16. Be careful not to damage the wire of the electric ignition and the probe of the safety valve.

– Using a 7 mm box spanner, replace the injector (indicated by the arrow in fig. 10.16) by the proper one according to the kind of gas.

– Replace the burner repeating the above steps in reverse order.
REGULATION OF AIR SUPPLY TO OVEN AND GRILL BURNERS

Using a screwdriver, slacken the screw securing the air flow regulation collar (fig. 10.17 and 10.18) and rotate the collar clockwise or anti-clockwise to increase or reduce the air aperture in accordance with gas type and the indications in the “TABLE FOR THE CHOICE OF THE INJECTORS”.
Light the burner and check the flame.
LEFT and RIGHT OVENS

REGULATING OF THE OVEN MINIMUM

This needs to be done only for the oven burner (the grill is a fixed capacity) by acting on the thermostat.

Considering that in the minimum position the flame must have a length of about 4 mm and must remain lit even with a brusque passage from the maximum position to that of minimum. The flame adjustment is done in the following way:

- Light the oven taking the knob to max. position 9*.
- Remove the knob and by a thin screwdriver (3 mm section - 100 mm long) unscrew of about a half turn the screw by-pass G, passing through the front panel hole (fig. 10.19)
- Fit the knob and let the oven heat for 10 minutes, then take the knob to position 1 allowing the thermostat to work under by-pass.
- After further removal of the knob, stop slowly the screw by-pass G (being careful not to turn the knob rod) until the flame reaches 3-4 mm high.

N.B. For LPG the by-pass screw must be fixed thoroughly.

LUBRICATION OF THE GAS TAPS

If the gas tap becomes stiff, it is necessary to dismount it accurately clean it with gasoline and spread a bit of special grease resistant to high temperatures on it.

The operations must be executed by a qualified technician.

IMPORTANT

All intervention regarding installation maintenance and conversion of the appliance must be fulfilled with original factory parts. The manufacturer declines any liability resulting from the non-compliance of this obligation.
For your safety please read the following information:

This appliance must be installed by a qualified technician according with the current local regulations and in compliance with the manufacturer instructions.

This appliance is supplied with a moulded 13 amp three pin mains plug with a 3 amp fuse fitted. Should the fuse require replacement, it must be replaced with a fuse rated at 3 amp and approved by ASTA or BSI to BS 1362.

The plug contains a removable fuse cover that must be refitted when the fuse is replaced. In the event of the fuse cover being lost or damaged, the plug must not be used until a replacement cover has been obtained.

Replacement fuse covers can be purchased from your nearest electrical dealer and must be the same colour as the original.

IF THE MOULDED MAINS PLUG IS UNSUITABLE FOR THE SOCKET OUTLET IN YOUR HOME OR IS REMOVED FOR ANY OTHER REASON, THEN THE FUSE SHOULD BE REMOVED AND THE CUT OFF PLUG DISPOSED OF SAFELY TO PREVENT THE HAZARD OF ELECTRIC SHOCK.

THERE IS A DANGER OF ELECTRICAL SHOCK IF THE CUT OFF PLUG IS INSERTED INTO ANY 13 AMP SOCKET OUTLET.

If a replacement plug is to be fitted, please observe the wiring code shown overleaf.

A properly earthed three pin plug (fused at 3 amps, to BS 1362 ASTA approved) must be used.

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows.

The wire which is coloured GREEN & YELLOW must be connected to the terminal in the plug which is marked with letter "E" or by the Earth symbol or coloured GREEN & YELLOW.

The wire which is coloured BLUE must be connected to the terminal which is marked with the letter "N" or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal which is marked with the letter "L" or coloured RED.

Warning! This appliance must be earthed.
ELECTRICAL FEEDER CABLE CONNECTION

To connect the supply cable:

- Remove the screws securing the cover “A” on the rear of the cooker (fig. 11.2).

- Feed the supply cable through the cable clamp “D”. The supply cable must be of a suitable size for the current requirements of the appliance; see the section “Feeder cable section” (fig. 11.2).

- Connect the wires to the terminal block “B” as shown in the diagram in figure 11.3; or connect the phase wires to the terminal block “B” and the earth wire to the terminal PE as shown in figure 11.2.

- Take up any slack in the cable and secure with the cable clamp “D”.

- Replace the cover “A”.

N.B. The earth conductor must be left about 3 cm longer than the others.
